

DuPont™ Tyvek®

PROTECTIVE PACKAGING

PROTECTIVE COVERS

**TopCover®**  
DuPont™ Tyvek®

**DuPont™ Tyvek® is the only cover solution on the market that is both water-resistant and offers breathability. These qualities, together with its UV-stabilizing capabilities, make Tyvek® the perfect protection for all types of vehicles including cars, motorcycles, quads, RV's, boats, military vehicles as well as industrial robots and air cargo transport solutions.**

These major investments require protection from harmful environmental conditions like pollution, dust, sunlight, tree sap and bird droppings, which is exactly the kind of protection Tyvek® excels at providing. It keeps abrasive particles out: dirt and dust can dull finishes and cause severe abrasion damage. This occurs when a scratch finish allows moisture to penetrate paint and promote rust. Tyvek® spunbonded olefin is specially engineered to keep out nearly all particles larger than 1 micron. Tyvek® also stabilizes temperatures and retains its mechanical properties in a broad range of temperatures from -70 to +85 degrees Celsius. It will keep working hard at protecting valuable vehicles in the freezing cold or the smoldering heat.

Tyvek® protective vehicle covers can stop up to 95% of UV rays, which prevents the exterior metal and paint and the interior leather, vinyl, rubber and fabric from degrading.

An investment in a Tyvek® cover helps prevent environmentally caused ageing, scratches and rust spots. Vehicles retain their value and appearance.

Robots, too, work in various conditions and environments, and Tyvek® can help them to keep working longer by giving them optimal protection. Flexible, lightweight Tyvek® can be custom made to fit robot parts, Tyvek® can be easily sewn and outfitted with Velcro, grommets, strapping, elastic and snaps as needed to provide perfect coverage. Lint-free, silicon-free and smooth, Tyvek® is a real asset in protecting the robots from paint splashes and dirt and thereby keeping them clean and extending their life.
